## ◆ Note

- Setting of the Type Code when Using a Conversion Adapter in Combination.  
In the case where an adapter is used in combination with a device with several packages, multiple display of the same product name, etc. may prevent setting of the optimal type code by selection of the product name (maker, size) set in the Programmer or by auto selection. Thus in this case, avoid setting the type code by product name selection. Instead, set the type code by inputting the type code referred from this list.
- The following precautions should be taken when using the AF-9700 Programmer Series.  
Given below are the precautions that need to be taken to use the AF-9700 Programmer correctly and the methods of checking and remedying displayed errors that can occur at a high frequency during use.  
In using the AF-9700 Programmer, please adhere to the precautions given below, and if an error corresponding to an error indicated below occurs during use, please carry out the check and remedy procedures.  
If an error does not correspond to any of those given below or if the error is not remedied, please inquire with our Sales Promotion Department using the Q & A sheet attached to the last page.

#### <Precautions >

1. Do not mount a device or adapter on the socket when the power of the Programmer is turned on.
2. Before writing or reading, be sure to check the mounting conditions (position, direction, contact conditions, etc.) of the device
3. Before writing or reading, be sure to use this list to check that the device and adapter are supported and check the type code that is set.
4. In using a device or adapter that is not supported by the auto type code setting function, be sure to perform type code setting by code input before reading or writing (prevention of silicon signature readout by backup function of auto setting).

There is danger of breakage of parts inside the device or adapter.

5. Before writing or reading, be sure to check the conditions of the socket (deformation or degradation of contacts, attachment of debris on contacts, etc.).
6. Since the socket is a consumable part, please carry out periodic cleaning and replacement (as a rule of thumb, replacement should be carried out every 2000 to 3000 times of use).
7. In the case of a product that is configured of a main body and units (AF9723), check the fitting before turning on the power.
8. With a product that is configured of a main body and units and has an FG (frame ground) contact terminal on the main body (AF9723), the FG contact terminal is a consumable part. Thus be sure to check that the FG contact terminal is not broken or degraded due to oxidation, etc. before turning on the power.
9. Before writing or reading, be sure to use this list to check that the device and adapter are supported and check the type code that has been set.

A write error or read error may occur.

10. Please retrieve the device name after setting a set mode of the type code to MAKER when a correct device name doesn't display it even if you input the type code.

Still, please inquire of our company if you cannot retrieve the regular device name of articles.
